1928 CATALOGUE OF

BECETARD ★ JAN 25 1928 ★ U.S. Department of Agriculture.

213-215 STATE STREET BOSTON, MASS

NORTHERN GROWN AND TESTED

"EMERSON'S SEEDS" Properly Interpreted Mean HIGH GRADE SEEDS at the Lowest Possible Prices with Satisfying Service

Ask your local merchant to order them for you

Emerson's Special Mixed Lawn Seed

In buying seed for your lawn, don't say, "Give me a pound of lawn seed." Ask for a brand that has made a reputation. Emerson's Special Mixed Lawn Seed is carefully tested for purity and germination, backed by over sixty years of fair dealings. It is sold by 1,000 reputable dealers in New England.

Many years agowe mixed up the first 100 pounds of solid seed lawn mixture, composed of the clear seed of the different kinds of fancy grasses. This was quite an innovation, for, previous to that time,

all lawn seeds were made up from seeds in the chaff.

This clear seed mixture, being beautiful in appearance, entirely free from dirt, chaff and dust, and of high germination, has never failed to please the most critical landscape artists and to this mixture we gave the name which was destined to become so popular, namely, Emerson's Special Mixed Lawn Seed. We are quite confident that this will produce the beautiful, green velvety lawn so much desired, if soil and weather conditions are favorable.

Ask your local dealer for "Emerson's Special Mixed Lawn Seed."

If he does not carry it in stock write direct to us. .

SEEDS BY MAIL

All Vegetable or Flower Seeds ordered at catalog rates, in **packets or ounces**, will be sent free by mail. When Seeds are ordered in quantities of one-quarter pound and upwards, postage must be added at Parcel Post rates.

We deliver Seeds to any express or railroad in this city as may be directed, and the purchaser pays all transportation charges.

WARRANTY

We give no warranty, expressed or implied as to description, quality, productiveness or any other matter connected with the goods we send out and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.

THOMAS W. EMERSON CO.

Emerson's Early Golden Sunrise Sweet Corn

is grown from stock seed of our own production, raised in New England, making it fully acclimated for any part of this country. This corn by actual test is ready for the table just six days after the Bantam, with an ear fully one-third larger than the Golden Bantam, having a beautiful golden color and a most delicious flavor, a type of sweet corn that will not only give to the market gardener a handsome return for his labor but will give to his customer the satisfaction he most desires. It is used by canners of high standing who insist upon procuring the highest grade of sweet corn for their most critical trade; a quality corn that will always be prized by the small gardener and the public in general. We believe that Emerson's Golden Sunrise Corn is the best golden corn ever catalogued. We ask all to give it a fair trial.

Our Packet Seeds

Every Retail Merchant Should Sell Them

Why?

BECAUSE all our seeds are grown for us by growers who have a national reputation for producing high-grade seeds; therefore all our packets contain seeds equal to any sold in bulk or otherwise.

We give all Merchant Customers the privilege of selecting their own assortments of packet seeds.

All Vegetable Seed packets put up in neat boxes of 300 each. Flower Seed packets in boxes of 200 each

THOS. W. EMERSON COMPANY

Is the only Wholesale Seedhouse in New England that does not advertise seeds at retail. We issue this Catalogue for the sole benefit of our merchant customers, and as a guide to them in retailing our high-grade seeds.

213 and 215 State Street

Boston - Massachusetts

EMERSON'S FORMULAS

FOR REVITALIZING WORN-OUT NEW ENGLAND SOIL

FORMULA No. 1

FARMERS

You can avoid a large percentage of your short crops and crop failures. Twenty-five, fifty or seventy-five per cent crops are unprofitable. A 100 per cent production is what will put you on Prosperity Road, which you are all seeking. This, we think, can be accomplished provided you will prepare your soil as suggested.

Let each farmer take ten per cent of his tillable acreage each year and treat as follows:

In the Fall thoroughly chop up the old meadow with a disc harrow before plowing. Sow this land in the early Spring with oats, vetch, and peas. Top-dress this crop with barnyard manure or 4-8-4 Commercial Fertilizer. When in bloom again use your harrow to cut the crop before plowing. Seed the same land with buckwheat. When in bloom harrow thoroughly before plowing. Seed the third time to rye and winter vetch. This crop should be harrowed and plowed in the following May.

We believe this treatment will have prepared this soil for any crop desired and should bring every farmer the 100 per cent production mentioned above.

FORMULA No. 2

PERMANENT MEADOW SEEDING FOR DAIRY FARMS

Sow per acre the following grass seeds:

10 lbs. Choice Timothy

8 " Alfalfa Clover

5 " Alsike Clover

4 " Red Clover

FORMULA No. 3

SEEDING FOR STOCK HORSE HAY

Sow per acre the following:

15 lbs. Choice Timothy

2 " Alfalfa Clover

2 " Alsike Clover

2 " Red Clover

DIRECTIONS FOR THE CULTIVATION OF VEGETABLES

To secure a good crop of vegetables, three things at least are necessary; viz., a suitable soil, pure seed and clean culture; to which may be added as equally necessary, an abundant supply of good barnyard manure, supplemented, when this runs short, by artificial fertilizers. The exposure for a vegetable garden should be preferably south or southeast, or nearly so. The soil should be naturally rich and friable, a sandy loam being among the best. If the soil be stiff, it should be gradually mellowed by the free use of barnyard manure, or, if convenient, by the addition of sand. If wet, or inclined to hold an excess of moisture, it should be underdrained, preferably by tile; but if possible, a location should be selected naturally dry and free from surface water.

A dark-colored soil, or one supplied with a goodly portion of decayed vegetable matter, will produce the earliest crops. If the soil be shallow, it should be deepened gradually by plowing or spading an inch or two deeper each year, and not all at once by trenching or subsoiling, unless manure and money be both abundant. A sandy soil may be greatly improved by adding more or less vegetable mold from the woods. To produce the best and most uniform results, the vegetable garden should have at least one foot of good, rich soil. The roots of large trees should not be allowed to encroach on any part of the garden, though large trees, especially evergreens, sufficiently far off, afford a valuable protection on the north and west.

DIRECTIONS FOR MAKING A HOTBED

In the vicinity of Boston, from the first to the middle of March is quite early enough to make a hotbed, and even a little later will do well enough. The time must vary according to the latitude. Provide a quantity of fresh horse manure from the stables, and add to this, if they can be had, one-third to one-half of its bulk of leaves. Mix them thoroughly, tramping down the mass in successive layers, and form into a large pile, so that fermentation will proceed even in severely cold weather. In two or three days fermentation will be apparent by the escape of steam from the heap. Now turn again, and allow the heap to remain two or three days longer, or until the second fermentation commences. Make an excavation, or pit, two and a half feet deep, and of a size suited to the number of plants required. The pit will be better if built up of brick. It should be made in some dry, sheltered spot, facing the south or east if possible. Hotbed sashes are usually 6 x 3 feet, and one sash will generally give early plants enough for a large family. The frame for sashes should be eighteen inches high at the back and twelve inches in front, which will give the proper slope to catch the sunlight. Cross-pieces should be placed for the sashes to slide on, to facilitate opening and shutting the frames. When everything is ready, the manure is placed in the pit and trodden down firmly in layers to the required depth, two to two and a half feet. Then put on the sashes and keep the pit closed until the heat rises. At first it will probably be 100 degrees or more, which is too hot to sow the seed in; but in two or three days it will subside to 90 degrees or a little less, when the soil may be put on to the depth of six to eight inches. The heat may be readily ascertained by plunging a thermometer in the manure. The soil should be of well-rotted sod (or common garden soil will do), mixed with about a third of fine, old manure, and in this the seeds may be sown thinly in drills two or three inches apart, and afterwards (as soon as out of the seed-leaf) either thinned out or else transplanted to another frame. Air must be given every mild day by raising the sashes at the back. Water with tepid water whenever necessary, and during cold nights and snowstorms keep covered with straw mats or board shutters. Tomatoes, Peppers and Eggplants should be sown in a separate frame from Cabbage, Cauliflower and Lettuce, as they require more heat than the latter. The same directions may apply to hotbeds made on the surface of the ground, except that the manure should be at least a foot wider on all sides than the frame.

THOMAS W. EMERSON COMPANY

A SUGGESTION

For the guidance of the Home and Amateur Gardener we append below a ready list of vegetable seeds which we recommend as the best varieties both for quality and productiveness.

We will be pleased to furnish you through your local merchant a trial sample of any seeds in this catalogue, so that you may prove to your own satisfaction they are the equal of any in the market.

For easy identification we have printed these varieties in **BOLD FACE CAPITALS** throughout the catalogue.

Many of these varieties are successfully grown in New England for seed purposes. Believing in the policy of New England grown seeds for New England climate we have specialized in growing such seed stock, which surpasses in size, color and vitality most of the Western grown productions. This fact will be appreciated by New England Seed Dealers and Growers.

ASPARAGUS—Conover's Colossal. A well known variety, large size and very tender.

BEANS, DWARF—Bountiful. Early, with large, broad, flat, fleshy, green pods, tender and of fine quality.

Emerson's Improved Golden Wax. A most valuable sort, early and very tender, with large, flat wax pods, remarkably free from rust.

Burpee's Improved Bush Lima. Earliest and largest of all the bush lima, very productive, with large beans of lucious flavor.

French Horticultural Dwarf. A grand shell bean with large green pods beautifully splashed with red, very prolific and fine flavor.

BEANS, POLE—Kentucky Wonder or Old Homestead. Enormous pods of light green color, entirely free from string, of delicious flavor.

Kentucky Wonder Wax. Very similar in habits of growth to those of the Kentucky Wonder Green Pod but superior in quality, large wax pods entirely stringless, and continues to bear until killed by frost.

King Horticultural (Worcester). As a shell bean it is unequalled, pods are very large, of handsome red color and very tender.

BEET—Crosby's Egyptian. The best, extra early, good color, of medium size and delicious flavor. **Edmands' Blood Turnip.** Medium early, uniform type, of deep red color.

Detroit Dark Red. The best for fall or winter use, dark in color, good size and of fine flavor. Swiss Chard. Excellent for greens to be used same as spinach.

BCRECOLE OR KALE—Dwarf German Green Curled. A well known variety, very hardy, one of the best for the garden.

BRUSSELL SPROUTS-Improved Dwarf German. Very productive, with compact heads of delicious flavor.

CAULIFLOWER—Snowball. One of the best for early use, dwarf, with white solid heads. Veitch's Autumn Giant. The best for late fall with large compact heads.

CABBAGE—Copenhagen Market. Early, with large round heads, short-stemmed, very solid, with leaves of light green.

Hollander or Danish Ball Head. An unsurpassed winter variety with round heads, large and solid, of very fine flavor.

CELERY—Boston Market. Of dwarf branching habit, unequalled by any other sort, being solid and very crisp.

Golden Self-Blanching. Early, beautiful yellow color, of excellent flavor.

CARROT—Early Scarlet Horn. One of the best early sorts as a table carrot, of excellent flavor. Improved Danvers Half Long. For a general crop the best, roots medium length, of deep orange color, very crisp and tender.

- CORN, SWEET—Emerson's Mammoth First Crop. The best large white eared corn grown, earlier than the Cory, with ears of double the size, very sweet, of delicious flavor.
- EMERSON'S EARLY GOLDEN SUNRISE. In our estimation the best yellow sweet corn ever catalogued; very prolific, of delicious flavor.

(See Page 1)

- Stowell's Evergreen. The standard late variety, remaining green a long time, very sweet and tender.
- GUCUMBER—Davis Perfect. Fruit of a dark green color, very handsome, crisp and tender, from ten to twelve inches in length.
- DANDELION-Improved French Thick-Leaved. A large leaved variety of upright growth.
- EGGPLANT—Improved New York Purple. Very large, of deep purple color, fine quality and excellent keeper.
- ENDIVE-Broad-leaved Batavian. The most popular variety, used chiefly in salads.
- KOHL-RABI-Early White Vienna. Fine early sort, flesh white and tender.
- LEEK-Large American Flag. Strong vigorous growth, excellent for home use.
- LETTUCE-May King. Early, with large globular-shaped head, very sweet and tender.
 - Black Seeded Tennisball. One of the best for open-air culture; heads are well formed and of fine flavor.
- MELONS, MUSK—Emerald Gem. Extra early, smooth ribbed, dark green skin, with orange flesh. Rocky Ford or Improved Netted Gem. One of the best early green fleshed melons, very sweet.
- MELONS, WATER—Cole's Early. An extra early variety, oval in shape, flavor excellent.
 - Kleckley's Sweet. Very popular, fine grained, large fruit, of excellent flavor.
- ONION—Yellow Globe Danvers. An early round variety, small neck, large yielder, mild in flavor, very uniform.
- PARSLEY—Double Curled. Large dark green leaves of robust growth, beautifully curled and very hardy.
- PARSNIP—Hollow Crown. One of the best for table use, medium length, with very smooth skin. PEAS—Little Marvel. A choice early wrinkled pea, very sweet, height 15 inches.
 - **Gradus.** A large podded first wrinkled pea. The pods are almost as large as the Telephone and are fit to pick about two days after the Alaska.
 - Sutton's Excelsior. A great improvement on the Nott's Excelsior; earlier, with larger peas, very prolific.
 - **Alderman.** A large podded late wrinkled variety, very productive, well filled with large peas of delicious flavor.
- PEPPER-Bell or Bull Nose. A large sort, flesh thick, less pungent than most varieties.
- PUMPKIN—Sweet or Sugar. Fine grain, very sweet, with a skin of deep orange color.
- RADISH—Scarlet Turnip. Very early, round small top, of rich scarlet color.
 - French Breakfast. A popular quick growing variety, oval form, scarlet tipped with white.
- SALSIFY-Mammoth Sandwich Island. Of good size, very smooth, with excellent flavor.
- SPINACH-Round Thick Leaf. The best for spring or fall sowing, large thick leaves.
 - **New Zealand.** A low spreading plant from which tender green leaves can be picked the entire season.
- SQUASH—Giant Summer Crookneck. Is early, extra large size, growing from 12 to 15 inches in length, of very fine flavor.
 - Delicious Winter. Green skin, orange flesh, very fine grained, sweet and dry.
 - Improved Hubbard. The most popular of all winter varieties, color bluish green with flesh of orange color, an excellent keeper.
- TOMATO—Sparks' Earliana. Remarkable for its size and earliness, very productive, of a good red color.
 - New Stone. A grand tomato of good size. Fruit, a scarlet color and good flavor; the best main crop.
- TURNIP-Purple Top Strap Leaf. Of quick growth, flesh is white, very fine grain and very sweet.
 - White Egg. A very rapid grower, very solid, with fine grained flesh; egg shaped.
 - RUTA-BAGA—Improved American Purple Top. Very largely grown, yellow flesh, of good flavor grand keeper.

shelled	40	75

BEETS

Betterave

Hunkel-Hube

Culture.—The best results are obtained on a deep, rich, sandy loam. If wanted very early sow in hotbeds and transplant, cutting off the outer leaves, or for general crop, sow as soon as the ground will permit, in drills eighteen inches apart, and thin out to three inches in the row. For winter use the turnip varieties may be sown in June. If possible, always sow in freshly prepared soil, which should be pressed firmly over the seed. A supply may be had for winter use by storing in a cellar and keeping covered with sand, earth or sods to prevent wilting, or they may be kept outdoors in pits such as are used for apples and potatoes. One ounce to 50 feet of drill, 5 to 6 pounds to acre.

Edmands' Blood Turnip Beet

BEETS-MANGEL WURZEL, SUGAR, ETC.

Kuntelruhen

Culture.—As all Mangels require a deep soil in order to grow well, plow and subsoil at least a foot to eighteen inches, and apply plenty of rich stable manure. Sow in May or June, in rows eighteen inches to two feet apart, and thin to eight inches in the rows. Young plants may be transplanted to fill up vacancies. Sow in addition, when the plants are three to four inches high, at the rate of 200 lbs. fertilizer, 200 lbs. bone flour and 400 lbs. salt per acre. As soon as frost occurs, dig the crop. Sow from four to five pounds to the acre.

1.00

rultivation

Coliflor

Blumen-Rohl

Culture.—Any soil that will grow Cabbage will grow Cauliflower; extra manuring and preparation of the soil will be well repaid. The seeds may be sown in September and the plants wintered over in the same manner as described for early Cabbage. Where this is not practicable it may be had just as well by sowing the seeds in the hotbed in January or February, and transplanting the plants at two or three inches apart in boxes or in the soil of another hotbed until such time as they are safe to be planted in the open ground, which in this latitude is usually from the 15th of March to the 10th of April. If properly hardened off they are seldom injured by planting out too early. For second early and late crop sow at the same date as given in the directions for Cabbage crop. One ounce for 1,000 plants.

Earliest Dwarf Erfurt. Dwarf and very early;	PKT.	oz.
large, compact heads .	\$0.10	\$3.00
Danish Giant (Dry Weather). Similar to Dwarf Erfurt, but with heavier foliage; are liable to blight in hot weather	10	3.75
SNOWBALL (Henderson). Very largely grown for an early crop. Of dwarf habit; heads white and solid. Pure stock	10	3.75
Early Paris. Ten days later than the above named. Finestim-ported seed	10	1.25
VEITCH'S AUTUMN GIANT. One of the finest fall varieties in		

CABBAGE

Berza de repollo

Kobl

Culture.—Soil for Cabbage should be rich and heavy loam, with good drainage. On such soil, with an abundance of stable manure, excellent crops are sure to be grown. For early spring sow in fall; not too early, or the plants are liable to bolt in the spring instead of heading. In a month the plants will be fit to transplant to cold-frames, where they are wintered, taking care in planting to set the young plants down to the first leaves. Transplant in spring as soon as the ground can be worked, setting the plants two feet apart one way and from twelve to eighteen inches the other, according to the variety. If it is desirable to economize space, Lettuce or Radish may be sown between the rows, as they will be out of the way before the Cabbage needs the room. For late or winter crops the seed is sown in May and the plants set out in July. In this case they are set in rows two by three feet, so as to work them with a horse and cultivator. One ounce will produce fifteen hundred plants.

CELERY

CELERI

Apio

Cellerie

Culture.—Sow the seed in a light, rich dry border as early as the ground can be worked, in drills eight or ten inches apart and cover the seeds about a quarter of an inch deep, rolling or treading them in if the ground be dry. The beds should be kept well weeded, and an occasional soaking with water in dry weather will do the plant good. The plants may be set in a single row in a narrow trench, or the trench may be made into a bed wide enough to hold two, three, or four rows, and in this case the plants are in a compact form to be covered for the winter where they grow. The beds should be made very rich with thoroughly decomposed manure. The plants will need to be earthed up two or three times. One ounce will produce 2,000 plants.

BOSTON MARKET. The dwarf, branching variety grown so extensively	PKT.	oz.	¼ LB. _∥
about Boston. It is unequalled by any other sort, being solid, crisp and of excellent flavor. Its compact, dwarf habit allows closer planting,			
and requires less earthing-up than the taller sorts	\$0.10	\$0.40	\$1.25

CORN-SWEET OR SUGAR

MAIS Maiz Mais

Culture.—Plant in hills three feet apart each way, and five or six kernels in a hill. Hoe often and draw soil up to the stems, break off side shoots. Make the ground rich with well rotted manure. Sown in drills, a greater yield from a given surface will be obtained. By sowing successive lots and properly selected varieties, the supply of Sweet Corn can be kept up until hard frosts kill the plants.

CUCUMBER

CONCOMBRE Cohombro Ourke

Culture.—Cucumbers succeed best in warm, rich, sandy loam. They should not be planted in the open air until there is a prospect of settled warm weather, in the vicinity of Boston about the middle of May. Plant in hills about four feet apart each way. The hills should be previously prepared by mixing thoroughly with the soil of each a shovelful of well rotted manure. When all danger from insects is passed, thin out the plants, leaving three or four of the strongest to each hill. The fruit should be gathered when large enough whether required for use or not, as, if left to ripen on the vines, it destroys their productiveness. One ounce for 50 hills; 2 to 3 pounds in hills for an acre.

DANDELION

PISSENLIT Amargon Bardebluw

Culture.—The Dandelion is a hardy, perennial plant, and one of the most desirable early spring salads. Sow in early spring, in drills half an inch deep and eighteen inches apart; thin out the plants to twelve inches. Keep clear of weeds during the summer, and the ensuing spring the leaves will be fit to cut. They are best, however, when blanched, which makes them tender and destroys to some extent their bitter taste without in any way impairing the qualities which makes them desirable as greens. The blanching may be done by placing a couple of boards over the rows, thus: \(\chi\). This excludes the light and improves the greens, rendering them far superior to those growing wild in the grass without cultivation, which are almost sure to be bitter, and are often unsightly and tough. One ounce, 50 feet of drill.

ENDIVE

For early use sow as soon as the ground can be worked in the spring, in drills fifteen inches apart, and thin plants to six to eight inches in a row. Any common garden soil will do; but a rather moist situation is preferable. To blanch the leaves gather them carefully together when perfectly dry, and tie with matting or any soft fibrous material. Another method is to invert flower pots over the plants. The leaves are very highly esteemed for use as salads. One ounce for three thousand plants.

LETTUCE

Culture.—For main early crop, seed may be sown in the open ground in the middle of September, and transplanted to cold frames as soon as large enough to handle, being wintered over the same as early Cabbage. In dry, well-sheltered spots, by covering with leaves or litter late in the season. Lettuce plant may be saved over the winter without glass covering in southern parts of the country without difficulty. The plants for setting out in spring are also sown in cold frames in March, and in hotbeds in February, and by careful covering up at night make fine plants by April. But for ordinary private use in the summer months, the simplest way is to sow it thinly in rows one foot apart and thin out the plants so that they will stand one foot apart. This is easier than transplanting the plants sown every two or three weeks from middle of April to middle of August. Lettuce may be had in perfection the whole season.

MUSKMELON

MELON MUSCADE

Melon Muscatel

Cantalupen

Culture.—Select a light, sandy, rich soil, and after all danger of frosts is over and the ground has become warm and dry, plant in hills four to six feet apart each way, six to twelve seeds in a hill. When up, and all danger of insects has passed, pull out all but three plants. Cultivate until the vines cover the ground, and pinch the ends of the growing shoots to induce early fruiting. Ashes, lime, or even dry road-dust is excellent to sift over the young plants when the dew is on, to prevent the attacks of insects. A few hills for early use may be had by sowing in hotbeds on pieces of sod or in pots. The seed may also be started out of doors under hand-frames or glasses. It is quite important that proper soil be selected for growing Muskmelons, as on heavy soil the quality will be poor. One ounce to 75 hills, 2 pounds to an acre.

mealy; average weight of forty to sixty pounds	10	15	40
Mountain Sweet. An old and reliable sort; red flesh	10	15	40
Phinney's Early. Early and of fine quality; red flesh	10	15	40
Peerless or Ice Cream. Very early; red flesh	10	15	40
Sweet Heart. Very early; one of the best	10	15	40
Vick's Early. Very early; long, smooth, with bright pink flesh; fine flavor	10	15	40

MUSTARD

For early salad, sow thickly on a gentle hotbed in February and March, and for general crop, at intervals during spring, on very fine soil, in rows six inches apart; it should be cut when about one inch high.

	PKT.	oz.	1/4 LB.
Black. The seeds form the mustard of commerce	\$0.10	\$0.15	\$0.30
White London. Leaves used for salad while young; grows very rapidly	10	15	30

MUSHROOM SPAWN

Mushrooms can be successfully and profitably grown during the winter and spring months on greenhouse benches among other plants, in frames, under greenhouse benches, as well as in the open fields or in cellars or outhouses. They are the most profitable crop for the outlay that can be grown, the American market being the best in the world for this delicious and healthful food.

Mushroom Spawn,	Englis	h.	Best mill	rack.	This q	uality (can alw	ays be re	e-	
lied on .										Per Brick 40 c.

OKRA OR GUMBO

One of the most wholesome vegetables. The pods, when young, of themselves make a fine soup or may be used with other vegetables. They are also pickled. After ground is warm and dry, plant seed thickly in drills 3 feet apart, thinning the young plants to 1 foot apart.

			PKT.	oz.	1/4 LB.

PEAS

Pois

Chicharos o Guisantes

Erbsen

Culture.—A week may be gained in earliness by sowing a quantity in moist sand placed in a box in the cellar, and planting outside when well sprouted. Light, dry soil, not overrich, suits the Pea. Sow as early as the ground can be worked, and again every ten days for succession up to the first of June, after which there is danger from mildew. Sow in single or double rows from four to six feet apart, according to the different heights, about an inch apart in the rows (except such sorts as we note to sow thin), and four inches deep. In this climate the Maud S. Peas, if planted from the 10th to the last of August, will produce a fair crop for fall picking, when Peas will be most acceptable. Hoe often and keep the ground clean and fine. The tall sorts can be made to bear more freely by pinching in. The dwarf varieties may be grown in beds like Bush Beans, with rows about the same distance apart. The holes which are sometimes found in Peas are caused by the Pea Weevil (Bruchus Pisi). This

PEAS—Continued

insect is a native of this country, but is now found nearly all over the world. The beetles lay their eggs on the young pods, and the larvae, as soon as hatched make their way through the pods into the nearest Peas. They do not, as is sometimes supposed, destroy the germ, for Peas will grow if they are infested, but the plant is likely to be more feeble. One quart to 100 feet of drill, 2 or 3 bushels to

EXTRA EARLY

Alaska. One of the very earliest blue peas; very productive. Height $2\frac{1}{2}$ feet	\$0.30		8 LBS. \$1.70
American Wonder. A remarkable variety of the finest quality; wonderfully productive and of dwarf habit, scarcely exceeding 12 inches in height. GRADUS. The largest podded first early wrinkled pea. The pods are almost as large	35	65	2.40
as those of Telephone, and are fit to pick about two days later than Alaska. Height 36 inches	40	75	2.80
Nott's Excelsior. Robust and vigorous in growth. An improvement on American Wonder, being more vigorous and prolific, with larger pods with more peas than either the Wonder or Premium Gem. Seed green, wrinkled, square at the ends like American Wonder. Height 14 inches	35	65	2.40
Premium Gem. A very fine dwarf pea of the Little Gem Type, on which it is a great improvement. Height 14 inches	35	65	2.40
LITTLE MARVEL. A remarkable, choice, early, wrinkled pea; height, 15 inches. Superior to Nott's Excelsior. Pods blunt end	35	65	2.40
SUTTON'S EXCELSIOR. A great improvement on the Nott's Excelsior, earlier, pods and peas larger, growing about the same height but giving a much larger yield, a very profitable pea to raise (see page 38). Height 15 inches	40	75	2.80
Thos. Laxton. The only rival to the famous Gradus,—as a long podded, extreme early wrinkled pea,—and in some respects even better. Height 36 inches	40	75	2.80
Laxtonian. An excellent early wrinkled pea of dark green color, very robust in habit, with well filled pods of large peas.	50	90	3.20
World's Record. A very early, large-podded pea. A great improvement on the Gradus as it is much more prolific	, 40) 75	2.80
MEDIUM EARLY			2
0 1	во.40 \$	0.70 \$	52.40
Advancer, McLean's. This variety takes the lead as a second early market pea; pods long and uniform, maturing well together; a green wrinkled marrow. Our stock of Advancers cannot be excelled for purity. Height 2 feet.	35	65	2.40
Bliss' Everbearing. A favorite for general use; branches considerably if not too thickly planted; large well-filled pods. Height 30 inches	35	65	2.40
Carter's Daisy or Dwarf Telephone. A most desirable pea on account of the large size, beautiful shape and fine quality of the pods. Season medium. Seed green, wrinkled; height 18 to 20 inches.	40	75	2.80
Dwarf Defiance. A valuable addition to the list of Half Dwarf large podded peas, much superior to the well-known Stratagem, bearing long, straight,			
handsome pods, well-filled with large Peas of delicious flavor and highest quality. Height 24 inches.	35	65	2.40
Emerson's Dwarf Champion. This Pea gives universal satisfaction, very pro-	35	65	2.40

SALSIFY, OR VEGETABLE OYSTER

SALSIFIS Ostion Vegetal Raserwurzel

Culture.—Sow as early as the ground can be worked in the spring, in drills twelve inches apart, one inch deep, and thin out to six inches in the row. Keep them free from weeds. Cultivate the same as for carrots and parsnips. A part of the crop may be left in the ground till spring, when it will be found fresh and plump. The roots are cut into pieces half an inch long, boiled until tender and then served with drawn butter, in which way it is a delicious vegetable. They are also mashed and baked like parsnips, and have a sweet, agreeable flavor. Mashed and fried the flavor is much like that of the oyster. One ounce to 60 feet drill.

TOMATO

TOMATE

Tomate

Liebesapfel

Culture.—Sow in a hotbed, greenhouse, or window in a sitting room, where night temperature is not less than 60 degrees, about the first week in March, in drills five inches apart and half an inch deep. When the plants are about two inches high they should be set out in boxes three inches deep, four or five inches apart, in same temperature, or removed into small pots, allowing a single plant to a pot. They are sometimes transplanted a second time into larger pots, by which process the plants are rendered more sturdy and branching. About the middle of May, in this latitude, the plants may be set in the open ground. They are planted for early crops on light, sandy soil, at a distance of three feet apart in hills in which a good shovelful of rotted manure has been mixed. On heavy soils which are not suited for an early crop, they should be planted four feet apart. One ounce for 1,500 plants; one-quarter pound (to transplant) for an acre.

Livingston's Beauty

Acme. One of the earliest and handsomest varieties ever introduced. The fruit is of medium size, perfectly smooth and regular in shape, very solid	PKT.	oz.	1/4 LB.

TURNIP

NAVET

Nabo

Ruben

Culture.—For early Turnips sow as soon as ground opens in spring. Imp. American and Laing's Early Swede should be sown from any time in July to first of August, but the other kinds, for winter use, may be sown from middle of July to end of August. Turnips are generally sown broadcast, but much larger crops are obtained (particularly of the Ruta-Bagas) by cultivating in drills eighteen inches apart, and thinning to six inches in the drill. Sow one pound to the acre.

GRASS SEEDS

Market Price

Timothy

Red Clover

Red Top

Timothy or Herds Grass. As a crop for hay, Timothy is probably unsurpassed by any other grass being greatly relished by all kinds of stock—weight per bushel, 45 pounds.

Fancy Recleaned Red Top. A valuable addition to sow with clover or Timothy, forming a very close sward for pasturage, also used for lawns—weight per bushel, about 32 pounds.

Chaff Red Top. The same as above, but being in a chaff state—weight, 10 pounds per bushel.

Chaff Rhode Island Bent. Resembles Red Top, but being shorter makes a very fine, close turf; very useful for lawns—weight, 10 pounds per bushel.

Kentucky Blue Grass. Sown on well drained land it is a most valuable pasture grass. Being very hardy, it withstands both heat and cold; also used for lawns—weight, 14 pounds per bushel.

Orchard Grass. A very desirable pasture grass, also producing large crops of hay, succeeding well in shady places—weight per bushel, 14 pounds.

English Perennial Rye Grass. Well adapted for cool, moist locations, producing a grass which is relished by all kinds of stock; hardy, and maintaining a bright green appearance throughout the season—weight, 24 pounds per bushel.

Italian Rye Grass. Different from the English Rye Grass, being larger and coarser in growth and being an annual, it only lasts one year—weight per bushel, 18 pounds.

Tall Oat Grass. Especially adapted for dry, light soils, making a grass very valuable for pasturage—weight per bushel, 12 pounds.

Meadow Fescue. As its name implies, especially suitable for meadow land, making a very fine pasture grass—weight per bushel, 15 pounds.

Tall Fescue. Very early, should form a part of all pasture mixtures on wet or heavy soil—weight per bushel, 15 pounds.

Hard Fescue. A very hardy grass, valuable for dry land and sandy soils, splendid for pastures of poor land—weight per bushel, 14 pounds.

Red or Creeping Fescue. A creeping rooted variety, suitable for dry, sandy soils, thriving on gravelly banks or exposed hillsides.

Chewings, New Zealand Fescue. One of the best grasses for golf links. Very hardy—weight 25 pounds per bushel.

Creeping Bent. The finest commercial grass for putting greens and lawns producing a beautiful, dense, soft, velvety turf so much desired.

Page Forty-nine

GRASS SEEDS—Continued

Market Price

- Wood Meadow. Suitable both for pastures and shaded lawns, thriving well under trees and in the shade—weight, 14 pounds per bushel.
- Crested Dog's Tail. A very hardy grass, forming a compact and lasting turf, roots deeply and withstands dry weather—weight per bushel, 28 pounds.
- Sweet Vernal. Used in mixtures for both lawn and hay land, giving a sweet odor to the grass when cut—weight, 11 pounds per bushel.
- Rough Stalked Meadow Grass. A splendid grass for moist lands or meadows, making a very nutritious hay—weight, 14 pounds per bushel.
- Meadow Foxtail. One of the best grasses for permanent pastures; early and of rapid growth—weight per bushel, 8 pounds.
- **Crimson Clover.** An annual variety giving large crops of green forage, or if cut while in bloom will make excellent hay; it also improves poor and worn out lands.
- Red Clover. This is used a great deal for restoring the fertility to poor and wasted soils; also if cut when in bloom will make excellent hay, being relished by all kinds of stock.
- Mammoth Red Clover Almost the same as the preceding one except that the flower and stem are darker, coarser and taller, and not so quick to mature.
- **Alsike Clover.** One of the hardiest varieties known, does not winter kill, doing well on moist land, making an excellent hay, although not so tall as the red clover; it is finer and more leafy.
- White Dutch Clover. A low growing clover with small round, white heads; it will stand close cutting as it grows very rapidly; very pretty for lawns.
- White Sweet Clover. Grown for bees, hay and green forage, also valuable as a pasture plant and soil fertilizer; larger and coarser than Alfalfa; as it is a biennial it will not last over two years. Sweet Clover should be cut for hay just before it commences to bloom, otherwise it will be very hard and woody; two and three crops a year can be cut; as it is very tall growing, the yield of green forage is tremendous.

ALFALFA Market Price

The growing of Alfalfa in New England is no longer an experiment. It is an established fact that three crops a year can be cut from land sown to Alfalfa, and being a perennial it lasts for many years.

As a fertilizing and land enriching crop it is unequalled. It makes excellent feed and stands in a class by itself. Cows, if fed with Alfalfa Feed, will produce more cream than by any other feed given them. Hogs thrive and get fat on it. Alfalfa feed is especially suitable winter food for hens and is a fine egg producer.

Alfalfa will stand more drought than any other variety of clover. A good, rich, well-drained piece of land thoroughly prepared and free from weeds is necessary for Alfalfa; the land must also be well sweetened, but if inclined to be sour put on a good dressing of fine ground lime and work it well into the soil before seeding.

Above all use good seed and you will have one of the best investments on your farms.

Seed required to plant one acre is 20 pounds.

We recommend our Hardy Northwestern Alfalfa. Ask for Emerson's & Brand.

GRASS SEEDS

Emerson's Special Mixed Lawn Grass Seed. A superior mixture for lawns, tennis courts, etc. Weighs about 32 pounds per measured bushel. Other lawn mixtures do not average over 16 pounds to the bushel. That the "Emerson" is the finest mixture of Lawn Grass Seed ever offered, the immense quantity we annually sell is the best proof we can offer. It is the best lawn seed for our American climate and is composed of various grasses that grow and flourish during different months of the year, so that a rich, deep green, velvety lawn is constantly maintained, it is the result of several years' careful experimenting, and as we now offer it, the mixture is unequalled, as we use in this mixture only the pure clean seeds of the different varieties of grasses. The quantity required for making new lawns is two bushels per acre. For a plot 20 by 30. or 600 square feet, 2 pounds are required.

Preparing the Soil. Plow or spade deep two or three weeks before seeding time. Then put on a heavy dressing of rotted manure and harrow it in. Work the surface again with drag or weeder to level and pulverize it thoroughly, and then roll it. Per pound, 60c.; 2-pound bags, \$1.20; 4-pound bags, \$2.40.

Emerson's Shady Lawn Seed. This mixture is made up of those grasses adapted for growing in the shade, under trees, etc.	60
Emerson's Gem Lawn Grass Seed. For those customers desiring a moderate-price lawn seed. While this seed does not contain the large varieties found in our special mixed, we believe it will give good satisfaction. Weight, 24 pounds to the bushel; 1 pound will sow 200 square feet. Put up in 1-pound cartons	50
Boston Lawn Grass Seed. A mixture of several varieties of grasses, weighing 20 pounds per measured bushel. Put up in 1-pound cartons	35

We also make up special mixtures of choice Grasses best adapted for lawns, banks, terraces and golf links, on both high and low land.

SEED GRAINS, ETC. Market Price

Welcome Oats

Montana or Chevalier Barley. A very popular two-rowed barley, commanding a high price on account of its very plump kernels and fine appearance, having heads a little longer than the six-rowed varieties.

Bald or Beardless Barley. A new variety of barley different from the other kinds, being free from the troublesome beards, is sixrowed and very heavy, measured bushel weighing 60 pounds although sold at the standard

weight of 48 pounds; very quick growing and if cut at the proper time makes excellent hay; it will yield about 50 bushels to the acre if raised for grain.

White Swedish Oats. Very productive, the grain is very large, handsome, plump and full, with a very fine, white, close fitting husk, stolling very heavily, with straight straw, standing four to five feet high.

Welcome Oats. A good yielder and very hardy, with very little rust, and is sure to give good satisfaction.

Spring Rye. Distinct from winter rye; grain of finer quality and more productive; can be grown successfully in any latitude.

White Winter Wheat (Beardless). This, being grown in Northern New York state, is more desirable for growing in this locality; very strong and vigorous.

Northwestern Spring Wheat (Beardless). The heads are long, well filled with good, plump kernels with straw of medium height; strong and wiry.

Flax Seed. Sow late enough in the spring to avoid frosts; a fair quantity of seed per acre is one-half bushel, when cultivated for seed; if for the fibre a larger quantity should be sown.

Japanese Buckwheat. This buckwheat is entirely distinct from all other varieties, the kernels being at least double the size of any other variety; the straw is heavier, branches more and does not need to be planted so thickly as other kinds; on account of its earliness it can be grown farther north than any other variety.

Silver Hull Buckwheat. Although not as large as the Japanese it is early and remains in bloom a long while, making it an excellent variety for bees; of a light gray color with a very fine husk.

Canada Field Peas. An old variety too well known to need any description, used both as a forage plant and in the making of soups.

Scotch Green Field Peas. Grown largely for early green forage; foliage is more rank and abundant than the Canada Peas.

Sand Winter or Hairy Vetch. Sown in fall, usually mixed with winter rye or wheat for support; should be cut as soon as the bloom appears; excellent for milch cows. Sown at the rate of 30-50 pounds per acre.

Spring Vetch. Used for the same purpose as the winter vetch, but is not so hardy and will not thrive on poor soil; sown with oats about a bushel to the acre should be used.

Emerson's E Brand Choice Rosen Winter Rye

The story of this wonderful grain with its rapid development and the great wealth which it has brought

to the farmers of this country reads almost like fiction.

to the farmers of this country reads almost like fiction.

Back in 1909, Mr. Rosen, a student from Russia at the Michigan Agricultural College, provided the College Plant Breeding Specialist with an envelope of a certain strain of Russian Rye. This small sample produced a crop that showed remarkable superiority. The succeeding crops so successfully carried out the promise of the first that the rye was named Rosen Rye, and widely distributed through the Farm Crops Department of the Michigan Agricultural College. This Rosen Rye is now known and used in every state in the Union. For several years it has taken the prize at the Grain Show at Chicago.

Recognizing the grand qualities of this grain, we immediately secured a stock of this seed and have as yet to find a customer who is not fully as enthused over it as we are. Our \$\psi\$ Brand represents the highest standard both in quality and productiveness. A bushel of this rye is worth a bushel and a quarter of the average seed, thus giving to the farmer a full value for money expended.

average seed, thus giving to the farmer a full value for money expended.

Heads of White Hulless Barley

MILLETS Market Price

Japanese Millet (Crus Galli). This grand, new Millet was imported from Japan by Professor Brooks of the Massachusetts Agricultural College. This grass has greatly surpassed Hungarian and German Millet in size and vigor of stock and yield of grain. It has enormous cropping qualities, surpassing Field Corn. The fodder is readily eaten by cattle and horses. The seed itself is equal in value to Corn meal for milk production and is excellent for poultry. The reports which we get from farmers who have used this the past season point to a large use of this seed for fodder purposes. We highly recommend it to all. At market price.

AMERICAN MILLET

Common Millet (Panicum miliaceum). Requires a dry, light, rich soil, and grows two and a half to four feet high, with a fine bulk of stalks, and leaves, and is excellent for forage. For hay sow broadcast, one-half bushel per acre, from May 1 to August 1. For grain sow in drills, one peck to the acre, and not later than June 20. Fifty pounds per bushel. At market price.

GERMAN OR GOLDEN MILLET

German or Golden Millet. An improved variety, medium early, growing three to five feet high. The heads are closely condensed, though the spikes are very numerous. The seeds are contained in rough, bristly sheaths, and are round, golden yellow and beautiful in appearance. At market price.

HUNGARIAN

Hungarian Grass (Panicum Germanicum). This is a species of annual millet, growing less rank, with smaller stalks, often yielding two or three tons of hay per acre. It is very popular and valuable with those who are clearing timber lands. Sow and cultivate like millet. Forty-eight pounds per bushel. At market price.

Rape, Dwarf Essex. A most profitable forage plant. We can think of no simple change which would do more to increase the profitableness of American farming than a more general use of Dwarf Essex Rape. It is an inexpensive crop, costing but little for seed or cultivation, is very hardy, can be made to take the place of some crop that has failed, and will yield an enormous crop of forage, or it can be sown after harvest as a cover crop; and when fed off by stock, particularly sheep, will rapidly restore the fertility of exhausted soils. It is important that the true biennial Dwarf Essex Rape should be used and not the annual sort, which is not only much less valuable as a crop, but which when once introduced becomes a pernicious weed very difficult to eradicate. At market price.

SWEET PEAS

Culture.—Plant early in warm, rich soil, covering two inches; a very good way is to dig a trench six inches deep by eight inches wide, and sow two rows about six inches apart, putting in about twenty-five seeds to the foot; cover two inches. When the plants are seven or eight inches high, fill in the trench; this insures the plant against drought.

White Spencer Sweet Peas

WHITE AND VERY LIGHT SHADES

White.—Nora Unwin. Dorothy Eckford. Shasta. Emily Henderson. White Wonder. Mont Blanc. Sadie Burpee, W. S. Sadie Burpee, B. S. Blanche Burpee. The Bride. Alba Magnifica. Queen of England. Josephine White. White Snapdragon. Burpee's Earliest White. Mrs. Sankey.

Tall Mixed. All colors.

Dwarf Mixed. Fine for beds or borders.

COSMOS. One of our most beautiful fall flowers; should be sown in May.

Choice Mixed. Best sorts in mixture.

CYPRESS VINE. Very beautiful twining annual with star-like flowers.

White. Pure white; a great favorite. Choice Mixed. All colors.

DAHLIA. This popular flower can easily be raised from seed and flowered the same season.

Choice Mixed Doubles. All varieties. Fine Single Mixed. Splendid mixture.

DELPHINUM (Larkspur). The tall sorts are very pretty in shrubbery and the dwarfs are very effective for beds. Both annual and perennials are easily grown from seed.

Double Dwarfs. Fine mixed annual Double Tall. A very choice mixed.

DIANTHUS (Pink). These, although biennials, should be treated as annuals; excellent for small beds with great varieties of flowers.

Heddiwigi. Fine double mixed.

Heddiwigi. Choice single mixed.

Carnation Pink. Choice mixed.

Barbatus (Sweet William). Finest double mixed.

Barbatus (Sweet William). Fine single mixed.

DOLICHOS LABLAB (Hyacinth Bean). Rapid growing annual climber with white and purple flowers.

Mixed Colors. Very fine mixture.

DIGITALIS (Foxglove). A hardy plant of easy cultivation; fine for groups among shrubs.

Finest Mixed. Very good mixture.

ESCHSCHOLTZIA (California Poppy). Hardy annual having delicate foliage and large poppy like flowers, beautiful for bedding.

Extra Fine Mixed. Tall varieties mixed.

GAILLARDIA. Very showy hardy plants; useful for beds and cut flowers; annual varieties.

Picta Single Mixed. Choice mixed colors. Lorenziana. Double mixed colors.

GLOBE AMARANTH (Gomphrena). Showy annual with globe shaped everlasting flowers.

Finest Mixed. Very choice mixture.

GODETIA. Splendid hardy annuals with large mallow-like flowers; rapid growers, flowering very freely.

Finest Mixed. Very fine mixture.

GOURDS. Climbing annuals; useful for covering fences or slopes and bearing gourds of very interesting colors and shapes.

Fine Mixed Varieties. All sorts.

Named Sorts. Bottle, Dish-cloth, Eggshaped, Sugar Trough, etc.

GYPSOPHILA (Baby's Breath). A free flowering hardy plant; very useful for cut flower work.

Elegans. White (annual). Paniculata. White (perennial).

HELIANTHUS (Sunflower). Very useful in forming backgrounds of large beds or borders.

Mammoth Russian. Single very large. Globosus. Large double Yellow.

Finest Mixed. Good mixture.

HELICHRYSUM (Everlasting Flower).
Showy annual, useful as dried flowers for winter bouquets.

Double Finest Mixed. Very choice.

HELIOTROPE. Very fragrant perennial, excellent for bedding.

Finest Mixed. Good mixture.

HOLLYHOCK. Hardy biennials; should be lightly protected during winter.

Chater's Double Finest Mixed. Very choice. Single Mixed. Choice mixed colors.

HUMULUS LUPULUS (Hop). Splendid annual climber; very ornamental.

Japonicus. Japanese Hop.

IPOMOEA (Convolvulus). Useful and showy annual climber of easy culture.

Bonna Nox (Evening Glory). Large blue flowers. Coccinea (Star Ipomea). Scarlet.

LATHYRUS ODORATUS. See Sweet Peas.

LANTANA. Tender perennial, suitable for pots and bedding.

Finest Mixed Hybrids. Free flowering.

LOBELIA. Annual varieties; fine for bedding and hanging baskets.

Crystal Palace Variety. Dark blue of spreading growth.

Gracilis. The best for hanging baskets.

Fine Mixed. Choicest mixed sorts.

MARIGOLD (Tagestes). Well-known hardy annuals of easy cultivation.

African Double. Lemon color. African Orange. Orange color.
African Mixed. All colors in mixture. African Eldorado. Large flowers. French Dwarf. Finest mixed. French Tall. Finest mixed.

MATRICARIA (Feverfew). Half hardy perennial with large showy flowers.

Grandiflora Flore Pleno. Double White Eximia Golden Ball. Golden yellow flow-

URANDYA. Greenhouse perennial climbers; unexcelled for vases, hanging baskets MAURANDYA. and trellis work.

Finest Mixed. A collection of purple, scarlet and white.

Page Sixty

MIGNONETTE (Reseda Odorata). A most popular fragrant annual.

Miles Spiral. Long spikes. Machet. Best for pot culture.

Parson's White. Splendid spikes of whitish flowers. Sweet Mignonette. The old favorite.

MIRABILIS (Four o'Clock). Half hardy perennial blooming the first year from seed.

Choicest Mixed. Good mixture.

Dwarf half-hardy perennials MYOSOTIS. bearing little star-shaped flowers.

Finest Mixed. Various shades of blue, rose and white. Palustris (True forget-me-nots). Bright blue.

NEMOPHILA. Free flowering hardy annuals; cup-shaped flowers of bright colors.

Finest Mixed. A splendid mixture.

PANSY. The finest blooms are to be obtained by sowing the seed in July or August, covering the plant during the winter.

Choice Mixed. A fine mixture. Masterpiece. Ruffled petals; mixed colors. Pkt. .20 Trimardeau. Giant Pansies of rich color. Pkt. .20

POPPY (Papaver). A flower that is too wellknown to need any description.

Shirley Finest Mixed. Ranging from white and pink to crimson. Mikado. Double fringed flowers: white striped with crimson. Oriental. Very early flowers; orange scarlet.

Iceland. Very choice mixed varieties. Fine Mixed. A collection of all sorts.

PETUNIAS. Very popular because of its easy cultivation, blooming from early summer to frost, a showy, free growing annual.

Finest Single Mixed. Choice Colors. California Giant. Flowers of immense size.

Double Mixed. Fine double flowers. Pkt. .25

PHLOX DRUMMONDI. One of our best annuals, easy of culture, making a beautiful display.

Grandiflora Finest Mixed. Very large flowers. Finest Mixed. Splendid colors.

PORTULACA. A charming dwarf annual for light soils; free bloomers.

Extra Double Mixed. A good mixture. Extra Single Mixed. Very finest varieties.

PYRETHRUM. Half hardy perennials, dwarf plants, excellent for borders.

Golden Feather. Golden Yellow foliage. Hybridum.—(Perennial). Finest mixed.

RICINUS (Castor Oil Bean). Tender annuals excellent for their beautiful foliage.

Finest Mixed. A mixture of all the choice varieties.

SALVIA. (Flowering Sage.) Splend of hardy or greenhouse perennials, very showy.

Salvia Splendens. Brilliant scarlet.

SALPIGLOSSIS. Half-hardy annual. Producing beautiful flowers of a tunnel-like shape, grand for cutting.

Large Flowering Mixed. Very beautiful.

SCABIOSA (Mourning Bride). Hardy annual of easy cultivation; very free bloomer.

Finest Mixed Double. Large showy Dwarf Double Mixed. Very choice.

STOCKS. Half-hardy annual. The delightful fragrance and free blooming character of this flower makes it a universal favorite.

Choice Mixed. All the choice varieties in this mixture.

THUNBERGIA. A rapid growing annual; excellent for window boxes, hanging baskets, etc.

Finest Mixed.

VERBENA. Half-hardy perennial. The Verbena is one of the most decorative and easily grown bedding plants.

> Mammoth Hybrids. Fine mixture. Fine Mixed. A good assortment.

WALLFLOWER. Half - hardy perennials of delicious fragrance.

Finest Mixed Branching.

ZINNIA. Most desirable and decorative annual for bedding.

Double Mixed. Choice double flowers. Curled and Crested. Large flowers with curled petals.

White. Pink. Purple. Crimson.

NASTURTIUM. Dwarf. All colors mixed.

Nasturtium or Tropaealum Minor. Hardy annual; one foot high. A bed of these in the yard is very brilliant and attractive, and blooms all the season oz. \$0.20 per lb. \$1.50

NASTURTIUM. Tall. All colors mixed.

Nasturtium or Tropaealum Major. Hardy annuals; grow five to ten feet high, producing brilliant colors and of many shades, from scarlet to black; make a very showy covering for arbors, trellises and rustic work oz. 20 per lb. 1.25

SUBJECT TO MARKET CHANGES

WILD GARDEN SEEDS. The introduction of these has proved a great success. Any one who has cultivated flowers in beds is aware of the amount of labor and constant attention necessary to produce the desired effect. To those who cannot give this care, the "Wild Garden" presents a substitute which, for its unusual and varied effects, for cheapness and the small amount of labor necessary for its construction, has no rival. "Wild Garden Seeds" are a mixture of varieties of hardy flower seeds. No one who has not seen such a bed can form an idea of its possibilities,

the different seasons of bloom insuring something new almost every day. Half-ounce packets, 25 cents.

Cuttle-Fish Bone. Used for birds.

Bone Meal for Poultry and Cattle. 100-lb. bags.

Mica Spar Grit. No. 2 for hens. No. 3 for pigeons. No. 4 for chickens. Per bag.

Faust Pigeon Grit.

Red Cross Pigeon Grit.

Animal Meal. For cattle and poultry. 100-lb. bags.

Sunflower. Large Russian, per lb.

Hemp, Large Russian. Much fed to pigeons and fowls that are being fattened for the table, per lb.

Canary. Valuable for chickens and pigeons, per bushel of 60 lbs.

German Rape. Fine for chickens and pet birds, per lb.

Unhulled Rice or Paddy. Used for parrots. Per lb.

Bird Gravel. Per pkg.

Ground Beef Scraps. 100-lb. bags.

Wheat.

Flax Seed. Per lb.

Barley. Per bu.

Buckwheat. Per bu.

Peas. Small white Canada, per bu.

Imported Millet. For chickens. In sacks of 220 lbs., per lb.

Hulled Oats. 100-lb. bags. Gem Chick Feed. Per100 lbs.

Our Gem Poultry Feed is one of the best on the market. It is a mixture of white and red wheat, barley, kaffir corn, buckwheat, in a proportion best suited for the production of eggs. Price per 100 lbs.

Our Gem Dry Mash. In our estimation the best mash on the market containing the following ingredients: Bean meal, corn meal, wheat meal, oat meal, beef scraps, bone meal, alfalfa meal and charcoal. An excellent balanced mixture forming a perfect ration in the producing of eggs with an analysis of:

Protein: 18.86 Crude Fat: 5.39 Crude Fibre: 11.53.

Charcoal. 3 sizes, No. 2 for hens. No. 3 for pigeons. No. 4 for chickens. Put up in 50-lb. bags.

Kaffir Corn. The heads are long and perfectly erect, well filled with white grain, flecked with reddish brown spots. The average height of growth on good, strong land is five and one-half to six feet. The seed heads grow from ten to twelve inches in length, and the product of grain on good land reaches easily fifty to sixty bushels per acre. The whole stock, as well as the blades, cures into excellent fodder. The seed, which is a small, round, white grain, is one of the most perfect pigeon foods known. As a food for poultry it is equal in nutriment to the common yellow corn. Pigeon and poultry farmers should use this in place of the whole or broken corn.

Polished Tares.

Tick Beans.

English Maple Peas.

Choice Northern Corn.

No. 1 Pigeon Feed.

FERTILIZERS—Market Price

SHEEP MANURE. As an ideal fertilizer it is one of the best, both for lawns and general garden purposes; is exceedingly rich in nitrogen, phosphoric acid and potash; it also adds humus which is absolutely necessary to the soil; it is the crude manure dried and ground to an even fineness; during this process all the weed seeds are killed. Put up in 1 lb., 5 lb., 50 lb. and 100 lb. packages.

PURE GROUND BONE. Excellent for soils that are inclined to be heavy or sour; by using this bone you will put into the soil something that is going to feed the plants not only the first year but will leave food for the roots the following year. Put up in 100 lb. bags.

BOWKER FERTILIZERS. All grades in 100 pound bags, at market price.

VICTORY PLANT FOOD

In VICTORY PLANT FOOD the clean, rich leaf mold of virgin woodland soil is reproduced naturally with its plant-nourishing and moisture-holding humus, to which is added just the right amount of vital food elements to take care of every need of the plant for beauty, health and vigorous growth.

Use it regularly and the results will amaze you. Your ferns and other plants will soon have full, luxuriant foliage—leaves that shine as though they had been waxed—abundant bright-colored blossoms. VICTORY PLANT FOOD is the secret of your success with plants. Follow simple directions and you cannot fail. Clean and odorless. Leading florists and nurserymen use and recommend "VICTORY."

INSECTICIDES AND MISCELLANEOUS—Continued STRICTLY PURE PARIS GREEN POISON

DIRECTIONS. For Potato Bugs, Cotton Worms, etc., if applied as a spray, use one pound of our Pure Paris Green to 50 gallons of water; one pound to 100 gallons is frequently strong enough. If dusted on, one pound to the acre is sufficient, mixed with not more than one bushel of Land Plaster. For spraying fruit trees use one pound to from 100 to 300 gallons of water, according to the nature of the tree.

1/4-pound boxes — 1/2-pound boxes — 1-pound boxes — Market Price.

N. B. Our stocks of any of the above can be obtained at your local dealer if so desired.

For Lawns, Golf Courses, Vegetable and Flower Gardens, SOILTEX provides a simple and economical means of testing the acidity of the soil and determining what treatment it requires.

test for acid soil

Does *Your* Soil Need Lime?

How Much Does It Need? Will It Pay? "Lime, Legumes and Inoculation"—this has come to be the slogan of the progressive farmer who wants to grow better crops and increase the fertility of his farm. Alfalfa, Red Clover, Sweet Clover, all require lime. Most other crops are benefited by it. Lime corrects acidity, sets free plant-food, improves the texture of the soil, and is necessary to the activity of nitrogen-gathering bacteria.

Save Money by Testing Your Soil-To apply less lime than is required, or to fail to apply it when needed, means loss of fertility and poorer crops. To apply more lime than your soil needs is wasting labor and money. Either way, you save money by testing your soil and knowing exactly what treatment it requires.

SOILTEX Tells What Your Soil Needs—With Soiltex, a new quick, easy and accurate soil testing method developed at the Michigan State Agricultural College, you can determine exactly in a few minutes whether your soil is acid, and how much lime it needs. Each outfit will make 75 to 100 tests. Full directions, color chart and lime table included. No special knowledge or equipment required. Costs less than 2 cents per sample tested. Soiltex will save
